The Utah Parcels interactive map is a web application designed for viewing and querying Utah parcel data available from the SGID. The application allows you to view parcel boundaries and get information about the parcel including parcel number, address, parcel ownership type, and county recorder contact information. The Utah parcel data is updated semi-annually and can be download directly from [here](#) . The Utah Parcels Interactive Map application utilizes the ArcGIS JavaScript REST API. Sean Fernandez is the Utah Cadastral Surveyor managing the Utah parcel data. View Utah Parcels interactive map.
